## DETAILED ACTION

### *Election/Restrictions*

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- Group I. Claims 1-51 and 68-79, drawn to a subcombination apparatus and method for reducing the size of wood chips, having a chute, dam, chute controller and load sensor, classified in class 144, subclass 337.
- Group II. Claims 52-62, drawn to a subcombination apparatus for reducing the size of wood chips, classified in class 144, subclass 172.
- Group III. Claims 63-67, drawn to a combination control system for a wood chip reducing apparatus, classified in class 700, subclass 56.

The inventions are distinct, each from the other because of the following reasons:

Inventions of Group III and Groups I and II are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed as evidenced by claim 63. The subcombination has separate utility such as use in a mobile harvesting apparatus. For example, the subcombination can be used in a mobile and/or tapered cylindrical rotating drum wood chipper and is not limited to the invention of Group III, i.e., combination for its practice. Moreover, the combination does not required a sawing apparatus having multiple or a plurality of blades as set forth in the subcombination invention (Groups I and II), thus it is evident by claim 63, the combination, can

be used with another chip reducing apparatus, such as with a chipper/canter having an endless chain saw. Accordingly the inventions are separable and distinct

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, different search requirements and because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
